

TLP: AMBER

WARNING: Information in this report is FOUO//TLP: AMBER. Recipients may only share TLP: AMBER information with members of their own organization who need to know, and only as widely as necessary to act on that information. Recipients may only share this information within their own organization, and only as necessary to act on that information, consistent with both the Del Complex policy relating to FOUO information and with the Traffic Light Protocol, <http://www.us-cert.gov/tlp>.

Twin Neural Synchronization Study 4-A7: Participant Records

Summary:

Del Complex has pioneered the Twin-Based Neurofeedback Reinforcement Learning (TBNRL) method. The genetic and physiological similarities between twin siblings are measured using a suite of signals in lab [REDACTED] and [REDACTED]. By using PsyNet we are able to collect high fidelity objective neurological data and [REDACTED] [REDACTED] in order to classify differences in [REDACTED]. System architecture involves a rich human-centric reward signal, [REDACTED] [REDACTED] and [REDACTED] parameters.

Study 4-A7 has been reviewed by the Del Complex ethics board and [REDACTED] [REDACTED]. Fifteen (15) health subjects were recruited from qualified members of the Del Complex employee pool. Three were unable to complete the study and one was removed. In total, [REDACTED] [REDACTED] and [REDACTED] petabytes.

Study 4-A7 began on [REDACTED] [REDACTED] of 20[REDACTED] and concluded [REDACTED] [REDACTED] of 20[REDACTED].

Data:

For access to datasets contact your organization's records and record management office and include the reason for access, length of access, and intended use of data. PsyNet recordings, electroencephalography, functional near infrared spectroscopy, skin conductance, heart rate, blood pressure, breath rate, cortisol levels, and subjective response from participants are available. Additionally, photographic documentation is available.
